BRAC University (Department of Computer Science and Engineering)

CSE 110 (Programming Language I) for Spring 2024 Semester

Quiz 1
Set A

Student ID:
Section: **Full Marks: 20**
Name: **Duration: 20 minutes**

---

1. Draw a flowchart to take input for all three sides of a triangle and check whether the triangle is valid or not. (The triangle is valid if the summation of the length of two sides is greater than the third one) **5**

2. Find out the Error type (Syntax Error, Logical Error, Runtime Error) **6**

a. Scanner sc = new Scanner(System.in);
int x = sc.nextInt();
// Then the user enters a string.
Ans:

b. public static void main(String[] args){
int a = 5;
System.out.println("num", a);}
Ans:

c. public static void main(String[] args){
int class = 5;
System.out.println("num" + class);}
Ans:

3. Write the output of the following lines. **4**

a. System.out.println(x – ((x+y%2) *3)//2), given x = 4, y = 5

Ans:

boolean a = true;
boolean b = false;
System.out.println(a && !b);

Ans:

4. Write a java program that takes two user inputs for the weight in grams and height in inches of a person and calculate the BMI of that person. **[Hint: BMI = weight/height^2, where weight has to be in kilograms and height has to be in meters. 1 kilogram = 1000 gram, 1 inch = 0.0254 meter**] **5**

CSE 110 (Programming Language I) for Spring 2024 Semester

Quiz 1
Set B

Student ID:
Section: **Full Marks: 20**
Name: **Duration: 20 minutes**

---

1. Draw a flowchart to take input for all three angles of a triangle and check whether the triangle is valid or not. (The triangle is valid if the summation of the angles is 180 and all the angles are positive) **5**

2. Find out the Error type (Syntax Error, Logical Error, Runtime Error) **6**

a. Scanner sc = new Scanner(System.in);
int x = sc.nextInt();
// Then the user enters a string.
Ans:

b. public static void main(String[] args){
int a = 5;
System.out.println("num", a);}
Ans:

c. public static void main(String[] args){
int class = 5;
System.out.println("num" + class);}
Ans:

3. Write the output of the following lines. **4**

b. System.out.println(x – ((x+y%2) *3)//2), given x = 8, y = 10

Ans:

boolean a = true;
boolean b = false;
System.out.println(!a && !b);

Ans:

4. Write a java program that takes two user inputs for the weight in grams and height in inches of a person and calculate the BMI of that person. **[Hint: BMI = weight/height^2, where weight has to be in kilograms and height has to be in meters. 1 kilogram = 1000 gram, 1 inch = 0.0254 meter**] **5**
