BRAC University (Department of Computer Science and Engineering)

CSE 110 (Programming Language I) for Spring 2024 Semester

Quiz 2
Set A

Student ID:
Section: **Full Marks: 20**
Name: **Duration: 25 minutes**

---

1. Write the code using iteration for the following problem. **5**

Keep taking inputs from the user and print the average of the first three odd-negative numbers.

Ans:

2. The BMI values are interpreted as follows: **6**

- up to 18.5: malnutrition
- from 18.5 to 25: normal
- from 25 to 30: overweight
- over 30: obese

[Hint: BMI = weight/height^2, where weight has to be in kilograms and height has to be in meters.

Write a java program that takes a person's weight in kg and height in meter as inputs and then writes to which category that person belongs.

3. Write a java program to print the factorial of a number taken by user input. For example, if the input is 5 then the factorial if 5 will be 5x4x3x2x1 = 120, 0! = 1. **5**

Ans:

4. Write the output of the following code block. **4**

```
int i, j, row = 4;
for (i=0; i<row; i++)   {
   for (j=2*(row-i); j>=0; j--){
       System.out.print(" ");
   }
   for (j=0; j<=i; j++ )  {
        System.out.print("* ");
    }
    System.out.println();
  }
```

Quiz 2
Set B

Student ID:
Section: **Full Marks: 20**
Name: **Duration: 25 minutes**

---

1. Write a java program to print the factorial of a number taken by user input. For example, if the input is 5 then the factorial if 5 will be 5x4x3x2x1 = 120, 0! = 1. **5**

Ans:

2. Write the output of the following code block. **4**

```
int i, j, row = 4;
for (i=0; i<row; i++)   {
   for (j=0; j<=i; j++ )  {
       System.out.print("* ");
   }
   System.out.println();
}
```

3. Write a java code using a while loop to keep taking inputs from the user and print the average of the first four even-positive numbers. **5**

Ans:

4. The BMI values are interpreted as follows: **6**

- up to 18.5: malnutrition
- from 18.5 to 25: normal
- from 25 to 30: overweight
- over 30: obese

[Hint: BMI = weight/height^2, where weight has to be in kilograms and height has to be in meters.

Write a java program that takes a person's weight in kg and height in meter as inputs and then writes to which category that person belongs.
