BRAC University (Department of Computer Science and Engineering)

CSE 110 (Programming Language I) for Spring 2024 Semester

Quiz 4
Set A

Student ID:
Section: **Full Marks: 20**
Name: **Duration: 25 minutes**

---

1. Write a Java method that takes two values as parameters and returns their sum, subtraction and multiplication. You also have to show the method calling and printing the results. 5

Sample Function:
calculate(3,4)

Sample Output:
Sum: 7, Subtraction: -1, Multiplication: 12

Ans:

2. Take an input N from the user. Now take N numbers from the user and store them in an array. i. Now write a java program to take another input, **a,** from the user and find out whether that number is present in the array or not.
Ii. Now extend the java program to find the sum and multiplication of all the elements of the array. 5

Sample Input:
N: 5
2 6 7 4 11
a: 7

Sample Output:
i. the number is present
ii. Sum: 30, Mult: 3696

Ans:

3. Take the base and height of two triangles as user input. You have to write a java method to calculate the area of these triangles and print the name of the larger triangle. (The method takes the base and height of a triangle and returns the area of that triangle.) 5

Sample Function:

Area(3, 4)

Area(5, 2)

Sample Output:

Larger Triangle: Triangle 1

Ans:

4. Write a java method named **isPrime**, which takes an integer as an argument and returns true if the argument is a prime number, or false otherwise. 5

Sample Function:

isPrime(11)

isPrime(9)

Sample Output:

True

False

Ans:

Quiz 4
Set B

Student ID:
Section: **Full Marks: 20**
Name: **Duration: 25 minutes**

---

1. Write a java method that takes two values and returns their modulus, power and division. You also have to show the method calling and printing the results. 5

Sample Function:
calculate(5,3)

Sample Output:
Modulus: 2, power: 125, Multiplication: 15

Ans:

2. Take an input N from the user. Now take N numbers from the user and store them in an array. i. Now write a java program to take another input, **a,** from the user and find out whether that number is present in the array or not.
Ii. Now extend the java program to find the sum and multiplication of all the elements of the array. 5

Sample Input:
N: 5
2 6 7 4 11
a: 7

Sample Output:
i. the number is present
ii. Sum: 30, Mult: 3696

Ans:

3. Write a java method named **isPrime**, which takes an integer as an argument and returns true if the argument is a prime number, or false otherwise. 5

Sample Function:	**Sample Output:**
isPrime(11)	True
isPrime(9)	False

Ans:

4. Take the radius of two circles as user input. You have to write a java method to calculate the area of these circles and print the name of the smaller circle. (The method takes the radius of a circle and returns the area of that circle.) 5

Sample Function:	**Sample Output:**
Area(3)	Larger Circle: Circle 2
Area(5)
