CSE 423 Makeup Quiz

Mark: 20, Time: 20 minutes

Name:	ID:	Sec:

1. Light from a point (8, 3, 2) falls on another point (5, 0, 0) of the surface of a sphere with center (0,0,0) and radius 5. The light intensity vector is given (0.8, 0.2, 0.5). Also the the diffuse reflection coefficient of the sphere is given (0.2, 0.6, 0.8). Calculate the diffuse reflected light value. 10

2. What does specular exponent/shininess factor k represent/model? Explain briefly. 5

3. Prove $R = 2 (L.n) n – L$ 5
