

Frame 2	D. Mac	S. Mac	D. IP	S. IP	D. Port	S. Port	Data	Trailer

Hint: In each case, you need to draw ONE frame only. Look at the figure above to see at which point the frame currently is. For example, frame 1 is currently between router 2 and 3. Since server A is the source and PC2 is the destination, if you try to trace the path, you will see that for that hop, data is going from router 3 to router 2. So source MAC will be router 3's MAC, and destination MAC will be router 2's MAC. This way, complete the frames. You do not need to do anything for the fields of Data and Trailer.
