

There are a total of five problems. You have to solve all of them.

Problem 1 (CO3): Designing Context-Free Grammars (10 points)

Let $\Sigma = \{0, 1\}$. Consider the following pair of languages. Recall that for a string w , $|w|$ denotes the length of w .

$$L_1 = \{w \in \Sigma^* : w \text{ contains exactly two } 0\text{s}\}$$

$$L_2 = \{x\#y : x \in L_1, y \in \Sigma^*, |x| = |y|\}$$

Now solve the following problems.

- Give a context-free grammar for the language L_1 . (4 points)
- Write down four seven-letter strings in L_2 . (1 point)
- Give a context-free grammar for the language L_2 . (5 points)

Problem 2 (CO3): Derivations, Parse Trees and Ambiguity (10 points)

Take a look at the grammar below and solve the following problems.

$$S \rightarrow BA \mid Abb \mid SS$$

$$A \rightarrow a \mid \varepsilon$$

$$B \rightarrow b$$

- Give a leftmost derivation for the string babbba. (3 points)
- Sketch the parse tree corresponding to the derivation you gave in (a). (2 points)
- Demonstrate that the given grammar is ambiguous by showing two more parse tree (apart from the one you already found in (b)) for the same string. (4 points)
- Find a string w of length five such that w has exactly one parse tree in the grammar above. (1 point)

Problem 3 (CO4): The CYK Algorithm (10 points)

Apply the CYK algorithm to determine whether the string yxxzy can be derived in the following grammar. You must show the entire CYK table. Here x , y and z are terminals, and the rest are variables.

$$S \rightarrow AB$$

$$A \rightarrow AC \mid y$$

$$B \rightarrow BD \mid EB \mid z$$

$$C \rightarrow AE \mid x$$

$$D \rightarrow y$$

$$E \rightarrow BD \mid x$$

Problem 4 (CO4): Chomsky Normal Form (10 points)

Answer the following questions.

- List the productions that violate the conditions of the Chomsky Normal Form (CNF) in the following grammar. (4 points)

$$S \rightarrow a \mid AB$$

$$A \rightarrow SB \mid ba \mid B$$

$$B \rightarrow b \mid \varepsilon$$

- Write down the additional rules that need to be added to the following grammar if the production $X \rightarrow \varepsilon$ is removed. (4 points)

$$S \rightarrow aXbXcX \mid X$$

$$X \rightarrow a \mid \varepsilon$$

- Write down the additional rules that need to be added to the following grammar if all the unit productions are removed. (2 points)

$$S \rightarrow Aa$$

$$A \rightarrow BC \mid C$$

$$B \rightarrow b$$

$$C \rightarrow A \mid AA \mid AaB$$

Problem 5 (CO3): Constructing Pushdown Automata (10 points)

Let $\Sigma = \{a, b\}$. Note that we define $c(w, x)$ to be the count of x in the string w .

$$L_1 = \{w \mid w \text{ is a palindrome and the length of } w \text{ is even.}\}$$

$$L_2 = \{w_1\#w_2\#w_3 \mid c(w_1, b) = c(w_3, b) \text{ or } c(w_2, a) = c(w_3, a)\}$$

Now solve the following problems.

- Give the state diagram of a pushdown automaton that recognizes L_1 . (4 points)
- Find all strings $w \in L_2$ such that w starts with babbab#abba# and has a length of 15. (1 point)
- Give the state diagram of a pushdown automaton that recognizes L_2 . (5 points)
