

POL101-20

1. Gellner and Anderson after Weber, Krasner, Tilly, Hunt, and Lefebvre.
2. Then we understand the state, how do people imagine themselves as a nation?
3. We practice to define concept, name the author, apply it to a scenario, and explain why it matters.

So Far

1. Heywood + Sartori: define politics and locate the political site.
2. Classical thinkers: authority, order, rights, consent, and legitimacy.
3. Kautilya / Chanakya + Machiavelli: statecraft, resources, strategy, and survival of rule.
4. Weber: modern state as legitimate force, territory, administration, and vocation.

Core Typologies

1. **Krasner:** four meanings of sovereignty: domestic, interdependence, international legal, Westphalian/Vattelien.
2. **Krasner:** four compromises: convention, contract, coercion, imposition.
3. **Tilly:** war-making, state-making, protection, extraction.
4. **Hunt:** mode of production, use/exchange value, four features of capitalism.
5. **Lefebvre:** six thoughts on state, economy, class, bureaucracy, democracy, and technocracy.

Weber Reading

1. **Modern state:** claim to monopoly of legitimate physical force within a territory.
2. Legitimate rule/authority: traditional, charismatic, legal-rational.
3. Politicians: occasional, part-time, professional.
4. Learning point: the state is not only service delivery; it is authority, administration, and legitimacy.

Krasner and Tilly

1. Krasner: sovereignty is not one perfect condition; its dimensions may not align.
2. Tilly: state capacity is built through conflict, protection, extraction, and organization.
3. the modern state is a process, not just a label.
4. Bridge: once the state exists, we ask how it connects to economy and society.

Hunt: Exploring Capitalism

1. Hunt does not treat capitalism as only buying and selling.
2. He asks: who produces, who owns, who works, and who controls surplus?
3. Mode of production = forces of production + social relations of production.
4. This prepares us to see the economy as political, not only technical.

Hunt: Core Typologies

1. Forces of production: labor, tools, machines, technology, skills, resources.
2. Social relations of production: ownership, labor, class, control, surplus.
3. Use value: what something does for need.
4. Exchange value: what something sells for in the market.
5. Four features of capitalism: commodity production, private ownership, wage labor, profit-seeking behavior.

Lefebvre

1. Economic growth and the state are historically connected
2. Capitalism grows out of earlier social structures
3. State and economy do not develop in the same order everywhere
4. The bourgeoisie has different forms
5. Economy does not directly produce politics. Social groups mediate the relationship.
6. Democracy is not only elections or offices. It also requires public pressure, participation, accountability, and active society.

Lefebvre's major comparative point

1. **England:** economic growth comes first; the state later supports it.
2. **United States:** economic expansion comes before the full federal state apparatus.
3. **France:** state apparatus and bourgeoisie become closely tied earlier.
4. **Germany, Italy, Russia:** the state plays a stronger role in pushing economic development.
5. **Underdeveloped countries:** the state may exist before deep capitalist development.
6. **So---**There is no single path of state formation.

Hunt and Lefebvre

1. Hunt explains capitalism as production, ownership, labor, market exchange, and surplus.
2. Lefebvre explains how the state apparatus interacts with capitalism, class forces, bureaucracy, and democracy.
3. Together: economic life needs political rules, public authority, infrastructure, and social struggle.
4. Midterm line: capitalism is not outside politics; the state is not outside economy.

Today: Why Move to Nation and Nationalism

1. So far: the state is authority, sovereignty, capacity, economy, and administration.
2. Now: how do people imagine belonging to a nation?
3. State = institutions, territory, law, authority.
4. Nation = shared peoplehood, memory, imagination, and belonging.
5. Simple line: the state governs; the nation belongs.

Gellner: Nationalism as Political Principle

1. Gellner defines nationalism as the principle that the political unit and national unit should be congruent.
2. Meaning: rulers and ruled should belong to the same nation.
3. A nation without a state may feel politically incomplete.
4. Gellner emphasizes the importance of fit, representation, and legitimacy.

Gellner: State and Nation Are Not the Same

1. **State**: specialized order-enforcing agencies; not every society has a state (population; territory; government and sovereignty).
2. **Nation**: people recognize each other as belonging together, sharing culture, signs, associations, or mutual recognition.
3. **Nationalism**: tries to align state boundaries with national belonging.
4. This is a principle and aspiration, not always a reality.

Gellner: Why the Fit Is Difficult

1. There are more potential nations than possible states.
2. Boundaries rarely match perfectly.
3. Nationalism can become politically powerful because it turns culture and belonging into a claim on the state.
4. Nation-state is an ideal type, not an automatic fact.

Anderson: Why Nationalism Matters

1. Anderson begins from a puzzle: modern political movements often define themselves in national terms.
2. He argues that nation-ness has become a powerful source of political legitimacy.
3. Nation, nationality, and nationalism are difficult to define but historically powerful.
4. His answer: nations are cultural artefacts with deep emotional force.

Anderson and Gellner: Concepts

Concept	Gellner	Anderson
Nation	Shared culture + mutual recognition	Imagined political community
Nationality	Belonging to a national group	Felt identity or nation-ness
Nationalism	Political principle: nation and state should match	Cultural-political attachment to the imagined nation

Anderson: Imagined Political Community

- Nation = imagined political community.
- Imagined does not mean false.
- It means members will never know most fellow members, yet still imagine shared belonging.
- Communities differ by the style in which they are imagined, not by whether they are real or fake.

Anderson: Four Parts of the Definition

1. **Imagined**: members do not personally know most others.
2. **Limited**: nations have boundaries; no nation imagines itself as all humanity.
3. **Sovereign**: born in an age when dynastic and religious authority declined.
4. **Community**: imagined as horizontal partnership despite inequality.

Gellner and Anderson

1. **Gellner asks:** why does nationalism want nation and state to match?
2. **Anderson asks:** how do people imagine themselves as one nation?
3. Gellner gives the political principle.
4. Anderson gives the cultural imagination.
5. **Both:** nationalism links identity, sovereignty, and state authority.

Connection to Weber and Krasner

1. **Weber:** the state claims legitimate authority within territory.
2. **Krasner:** sovereignty is uneven and historically compromised.
3. **Gellner:** nationalism asks that state boundaries match national belonging.
4. **Anderson:** national belonging gives emotional and symbolic force to sovereignty.

Connection to Tilly, Hunt, and Lefebvre

1. **Tilly**: states are built through coercion, extraction, protection, and capacity.
2. **Hunt**: capitalism organizes production, labor, ownership, and surplus.
3. **Lefebvre**: state, economy, society, class, bureaucracy, and democracy interact.
4. **Gellner and Anderson**: identity and belonging

Today's Core Takeaway

1. The course began with the question: what is **politics?**
2. It moved through authority, statecraft, modern state, sovereignty, capacity, capitalism, and state-society relations.
3. Today adds **nation and nationalism.**
4. modern politics is not only rule over territory; it is also the imagined belonging that makes people see a state as theirs.
